# Internet's safe-keepers forced to postpone crucial DNSSEC root key signing ceremony – no, not a hacker attack, but because they can't open a safe

Online security process stalled by offline security screw-up

Kieren McCarthy in San Francisco Thu 13 Feb 2020 // 06:09 UTC

SHARE

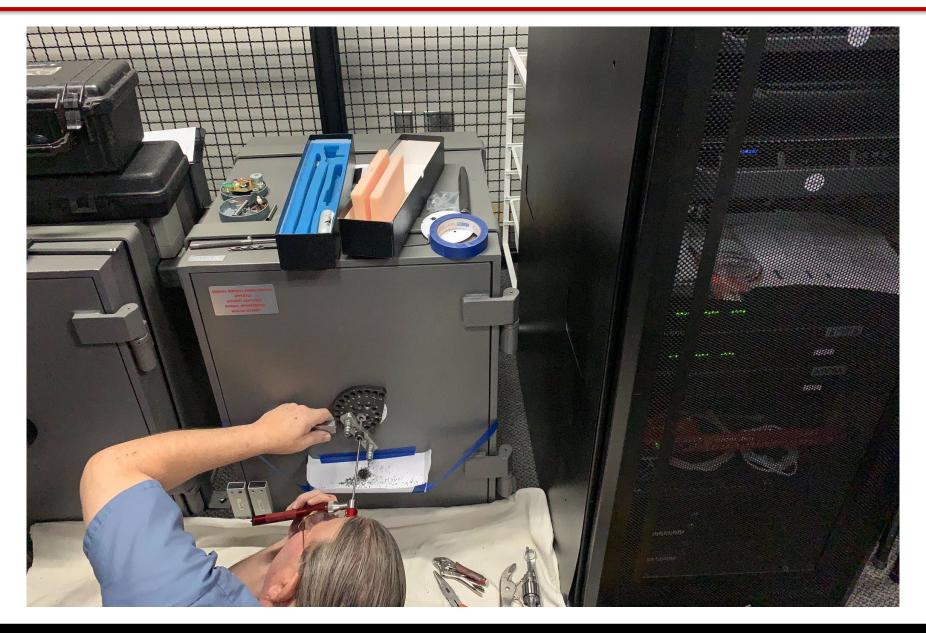

The organization that keeps the internet running behind-the-scenes was forced to delay an important update to the global network – because it was locked out of one of its own safes.

"During routine administrative maintenance of our Key Management Facility on 11 February, we identified an equipment malfunction," explained Kim Davies, the head of the Internet Assigned Numbers Authority (IANA), in an email to the dozen or so people expected to attend a quarterly ceremony in southern California at lunchtime on Wednesday.

The malfunction "will prevent us from successfully conducting the ceremony as originally scheduled" on February 12, Davis explained. "The issue disables access to one of the secure safes that contains material for the ceremony." In other words, IANA locked itself out.

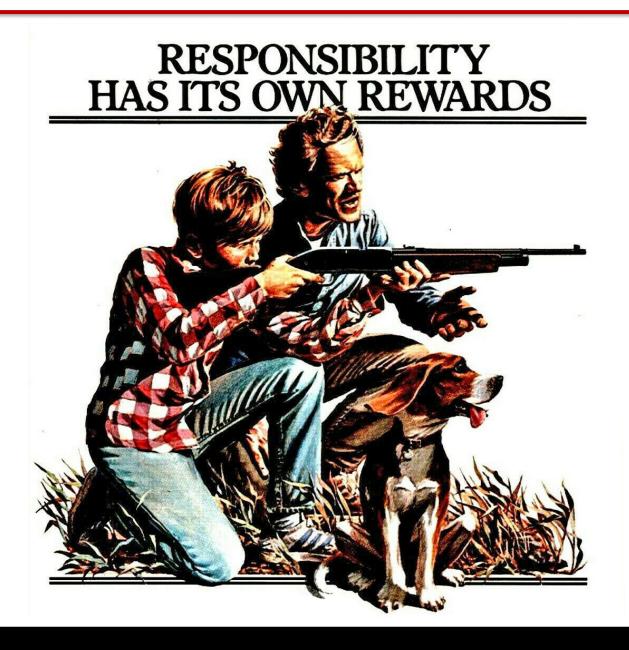

The ceremony sees several trusted internet engineers (a minimum of three and up to seven) from across the world descend on one of two secure locations – one in El Segundo, California, just south of Los Angeles, and the other in Culpeper, Virginia – both in America, every three months.

Once in place, they run through a lengthy series of steps and checks to cryptographically sign the digital key pairs used to secure the internet's root zone. (Here's Cloudflare's in-depth explanation, and IANA's PDF step-by-step guide.)

#### **Children And Firearm Safety**

Children and guns are simply a bad idea. Your average firearm is too unwieldy for a typical child to operate in a safe and effective manner.

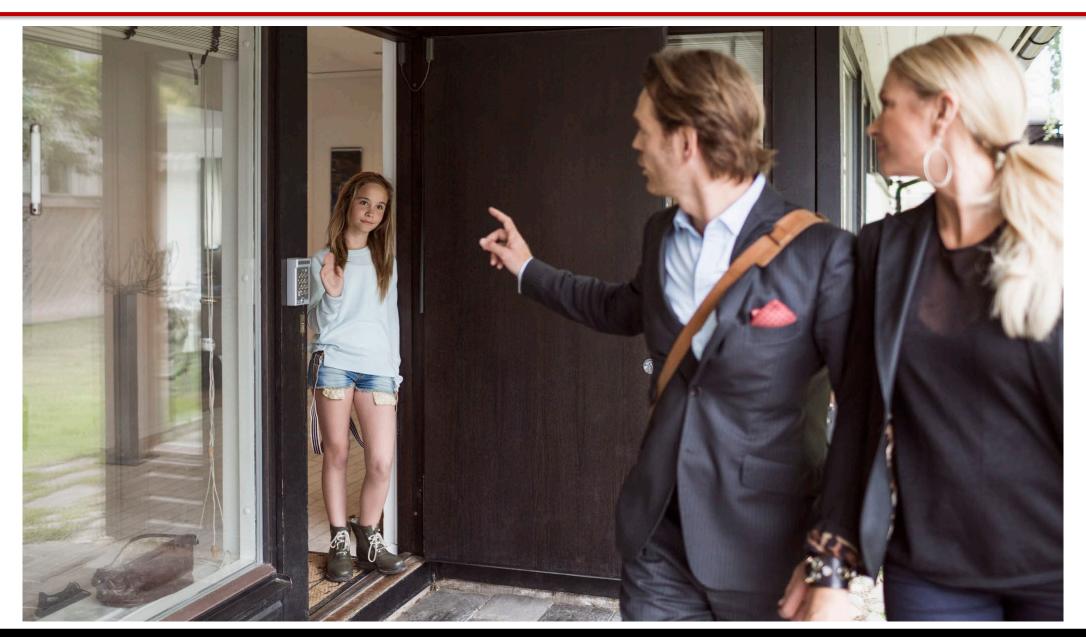

Children are much better suited to crew served weapons. The semi stationary characteristic of a mortar or heavy machine gun relies less on the child's physical strength and stamina and also builds teamwork.

# Woolsey fire destroys Australian director's home, burns savings kept in fire-proof safe

An Australian director has been left with only a few dollars and the clothes on his back after a wildfire in southern California burned down his home and the safe where he kept his life savings.

Neil Johnson and Tracey Birdsall evacuated their home last week as the Woolsey fire closed in on their Malibu estate. The fire eventually burned thousands of acres, including the couple's home.

"Everything in there is dust now. The heat literally destroyed everything," Johnson told Seven News.

"I had all my cash in a safe because I didn't trust the banks, and that's now burned down," Johnson said, adding he now only has \$20 and the clothes he's wearing.

A GoFundMe was set up for Birdsall looking to get as much as \$100,000 in donations. It's so far raised more than \$2,000.
